

what is Sahiboard

is a touch screen or tablet pc whiteboard which can connect and interactive with personal computer, which mean you can open computer programs, write, draw, save and print file.

benefits

- Creates an interacted teach-and learn environment delivering multimedia materials to the whole group (this giving a stronger sense of involvement to the students and improving their understanding and knowledge more easily)
- Deliver your presentations in a new and advanced way which enhances the attention & understanding of the audience.
- Make your net-meeting or other modes of remote communication really "interactive"
- Record all screen activities in the PC automatically, remove the trouble of notes taking.
- Projector over computer generated images and capture them for future use.
- Durable surface material suitable for daily classroom use.
- Bright image quality, large viewing area up to 100 diagonals.

features

OVERVIEW

WRITING MODE

- Region edit
- Writing
- Drawing function
- Brush pen
- e-keyboard
- Reply
- Spotlight
- Zoom
- Highlight Function
- Flourescense pen
- Sahiboard can send small pictures, and web pages

INTERACTIVE MODE

SHARING FIND NETMEETING

- Last page
- Whiteboard page
- Interactive Mode
- Annotation Page
- Management center
- Erase
- Increase E-pen width
- Decrease E-pen width
- Print

all the process can be saved automatically, can be printed and sent out via e-mail in the toolbar management center.

overview

It's a digitized teaching and demonstrational device intended to replace the traditional blackboard and chalk. Sahiboard is highly recommended in the modern world. Sahiboard incorporates many high technologies such as:

- high-resolution electronic technology,
- software technology and
- network technology.

The occurrence of the Sahiboard will lead to a revolution to the traditional teaching mode. Just as the digital camera replaced the traditional camera and the CD replaced the traditional cassette recorder, Sahiboard will replace the traditional blackboard. Sahiboard is PC-based input device with interactive functionality and can easily realize functions such as information presentation, edition, printing, saving and remote interaction. Apart from this, due to the good projection effect of low reflection possessed by its surface, it can be used as a projection screen, while its features of heat resistance, abrasion resistance and erase ability can satisfy the requirements for manual writing as the traditional blackboard. Sahiboard is bound to be the dominant device for the future teaching, conferencing, remote education and information exchange.
